

AURALIS

THE ART OF SILENCE

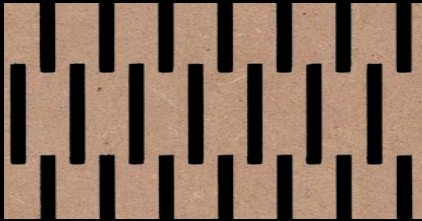

Incision type: **SONAR**

In the SONAR type cut, the regularly arranged incisions are visibly set off in the longitudinal direction on the panel surface. This visually creates horizontal lines in addition to the vertical ones. The front and back sides are clearly distinguishable. The applications are mainly in the field of ceiling and wall applications for visual and acoustic interior design.

SONAR's regularly incisions in longitudinal direction are discontinuous on the surface. This arrangement creates besides the vertical lines, also horizontal lines as a visual effect. Therefore, front and reverse side look clearly different. Application areas are mainly ceiling- and wall panels.

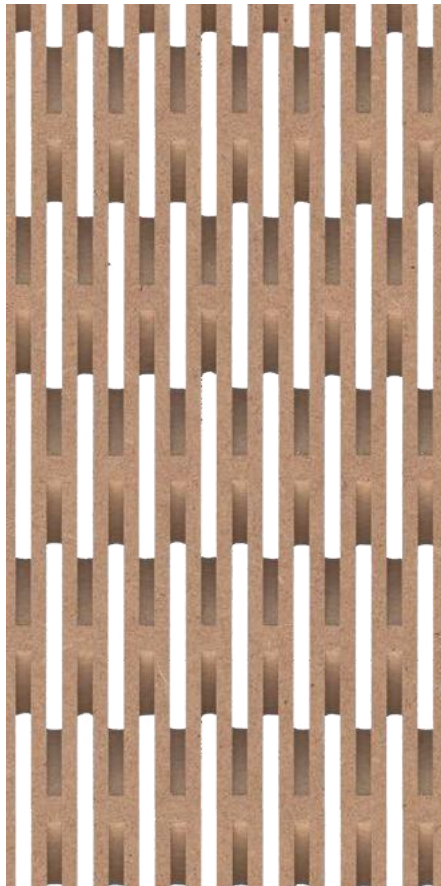

back side: 4/4 mm, MDF nature

4/4 mm, MDF black 10 mm

Technical Data

Material	MDF, Plywood, 3-Layer Board
Standard incision	4 mm Nut / 4 mm Steg Cut / Bar
Min. bendign radius	Ca. 120 mm
Open area:	20% - 40%
Standard dimensions	2400 mm x 1200 mm x 6-12mm
Surface	Verneer, spray paint, coat, oil

front side: 4/4 mm, MDF nature
